

In a mad scramble

A Melton woman has become the oldest female to solve the Rubik's cube in a national competition. Adelina Estevao says she spends hours practising each day and has done so for the past 30 years. She can now solve a Rubik's cube in just 2½ minutes. Adelina lives at Brookfield Village in Melton after having moved to Australia from Portugal in 1987. She says she reaches for the Rubik's cube because it keeps her mentally active.
